### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

#### **DETAILED ACTION**

1. This office action is in response to RCE filed on 2/28/2008.
2. The objection to the specification is withdrawn in view of the Applicant's amendment to the Specification.
3. The 35 U.S.C. § 112 2<sup>nd</sup> rejections of claims 1, 2, 4-10, and 12-16 are withdrawn in view of the Applicant's amendment to the claims.
4. Per Applicant's request, claims 1, and 9 have been amended.
5. Claims 1, 2, 7-10, and 15-16 are allowed.

#### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in communication with Shun Yao (Reg. No. 59,242) on March 18, 2008 to obviate any potential issues and to put the claims in condition for allowance.

6. The application has been amended as follows:

The following currently amended claims replace all previously presented claims.

1. (Currently Amended) A method for performing time measurements during instrumentation-based profiling, comprising:

measuring an overhead time, wherein the overhead time is the time required to execute profiling instrumentation code in isolation measured through a calibration procedure, wherein the

Art Unit: 2191

calibration procedure involves executing the instrumentation code in a loop for a number of times, and wherein multiple copies of the instrumentation code are included in the loop;

receiving a code to be profiled;

inserting the profiling instrumentation code in the code;

executing the code including the instrumented portions of the code;

measuring a time for executing the code including the instrumented portions of the code;

and

subtracting the overhead time from the measured time to obtain the time for the code to be profiled;

wherein the profiling instrumentation code is executed multiple times to determine an average value for the overhead time;

wherein the profiling instrumentation code includes method entry code that takes a first time measurement at the beginning of a method, and method exit code that takes a second time measurement at the end of the method, wherein the first and second time measurements are used to calculate an execution time for the method; and

wherein determining the overhead time involves calculating an inner time  $t_I = x_2 + y_1$ , wherein  $y_1$  is the time between when the first time measurement is taken and when the method entry code is finished executing, and wherein  $x_2$  is the time between when the method exit code begins executing and when the second time measurement is taken.

4. (Canceled)

5. (Canceled)

6. (Canceled)

7. (Currently Amended) The method of claim 61, wherein the time  $t_{exact}$  for executing instrumented portions of the code is calculated as  $t_{exact} = t_{meas} - t_I$ .

9. (Currently Amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform a method for performing time measurements during instrumentation-based profiling, wherein the computer-readable storage medium includes magnetic and optical storage devices, disk drives, magnetic tape, CDs

Art Unit: 2191

(compact discs), and DVDs (digital versatile discs or digital video discs), the method comprising:

measuring an overhead time, wherein the overhead time is the time required to execute profiling instrumentation code in isolation measured through a calibration procedure, wherein the calibration procedure involves executing the instrumentation code in a loop for a number of times, and wherein multiple copies of the instrumentation code are included in the loop;

receiving a code to be profiled;

inserting the profiling instrumentation code in the code;

executing the code including the instrumented portions of the code;

measuring a time for executing the code including the instrumented portions of the code;

and

subtracting the overhead time to obtain the time for the code to be profiled;

wherein the profiling instrumentation code is executed multiple times to determine an average value for the overhead time;

wherein the profiling instrumentation code includes method entry code that takes a first time measurement at the beginning of a method, and method exit code that takes a second time measurement at the end of the method, wherein the first and second time measurements are used to calculate an execution time for the method; and

wherein determining the overhead time involves calculating an inner time  $t_I = x_2 + y_1$ , wherein  $y_1$  is the time between when the first time measurement is taken and when the method entry code is finished executing, and wherein  $x_2$  is the time between when the method exit code begins executing and when the second time measurement is taken.

12. (Canceled)

13. (Canceled)

14. (Canceled)

15. (Currently Amended) The computer-readable storage medium of claim 14~~9~~, wherein the time  $t_{exact}$  for executing instrumented portions of the code is calculated as  $t_{exact} = t_{meas} - t_I$ .

-end of currently amended claims-

7. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fail to teach the limitation "the calibration procedure involves executing the instrumentation code in a loop for a number of times, and wherein multiple copies of the instrumentation code are included in the loop;" with the specific profiling code instrumentation as recited in independent claims 1, and 9.

The closest cited prior arts by Beck et al (PGPUB. No. 2002/0049963) and Almy et al. (US Patent No. 6,609,216) disclose a method of measuring overhead time. However, it does specifically disclose measuring overhead time using multiple copies of instrumented code inside a loop and getting an average time for the measured time.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
